**IoT Connect** – Data Pool

Pool your resources and increase your flexibility

By pooling the data from each of your SIMs, you can share it so each SIM gets as much as it needs. This gives you greater flexibility and simplicity and lets you avoid unnecessary exceeding fees.

For example, if you order **100 SIMs** with **5MB** on each, you get a **total data pool of 500MB** for the month. This can then be shared between those 100 SIMs according to how much each one needs – whether it's 2 MB in the month or 200 MB. And as along as you stay within your total pool, you won't get any exceeding fees.
